**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 to 39, 82 to 90 and 106, drawn to a method for detecting device-enhanced memory module, classified in class 714, subclass 763.
  - II. Claims 40 to 64, 91 and 108, drawn to a method for learning an error detection and correction scheme, classified in class 714, subclass 764.
  - III. Claim 103, drawn to memory module including check bit generation, classified in class 714, subclass 801.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions group I, a method for detecting device enhanced memory and group II, learning an error detection and correction scheme are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group II does not require identify a device-enhanced memory to correct detected errors in a memory system. The subcombination has separate utility such as detecting and correcting errors.
3. Inventions group I, method for detecting device enhanced memory and group III a memory module including a check bit generation are related as combination and

subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group III does not need the particulars of detecting a device enhanced memory. The subcombination has separate utility such as generating a check character.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Mr. Jeffery C. Hood on March 18, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
